

Kansas Waiting List Study

IDD Findings

- Working in the community was a high priority, therefore need enhanced coordination b/w VR & educational institutions.
- Respondents expressed a strong preference for living with family, spouse/partner or alone (vs congregate setting).
- Majority indicated they needed hourly or daily supports.
- Kansas differs from other states by not offering TCM or other services for folks on the waiting list.

Crisis Exceptions to the Waiting List

I/DD Crisis Reasons from Fiscal Year 2021 – 2023	Total
Crisis Exceptions

School Transitions	11 (2%)
Transfers from SED waiver	7 (1%)
Dementia/Cognitive Decline	5 (1%)

Preferred Living Situation

Most on the Waiting list have frequent support needs

Challenges for Caregivers

Kansas Waiting List Study

IDD Recommendations:

- Creation of a public-facing dashboard that would provide a transparent, secure, integrated data system for HCBS system and waiting list management.
- EPSDT is an underutilized resource for children on the waiting list.
- Emphasized need for CSW to include respite and personal care services.
- IDD system needs a comprehensive approach to supporting individuals' emotional and behavioral health needs.
